Bill Nye the Science Guy

Smell

Table of Contents

1. **Implementation Guide** ............................................................. 2–9
   This descriptive guide will assist you in integrating the DVD science and education content into your instructional program.

2. **National Science Education Standards** ................................. 10-11
   See the complete *National Science Education Standards (NSES)* correlated for this program.

3. **Episode Guide** ................................................................. 12
   Step-by-step procedures make it easy to complete the experiments shown in the program.
   “More Interesting Stuff to Do” gives more experiments that extend student learning.

4. **Lesson Planning Worksheet** ................................................. 13–14
   This template helps you incorporate all the features of the Bill Nye DVD into your daily lesson plans.

5. **Student “Know / New” Chart** .............................................. 15
   A “Know-New” T-Chart assesses students’ prior knowledge and what they learned.

6. **Student Recording Sheet** ..................................................... 16
   This handout gives you a standardized format that students can fill out as they conduct an experiment.

7. **Glossary** ........................................................................... 17-18
   Use the terms and definitions found here to assist you in direct vocabulary instruction.
   The glossary terms are also found on the DVD.

8. **Quiz** .................................................................................. 19
   This written version of the interactive quiz on the DVD provides a ready-to-go written test. Multiple choice and true-false items address key concepts found in the standards and in the program.

9. **Quiz Answer Key** ............................................................... 20
   A separate page contains the quiz answer key.
Implementation Guide

Welcome to Disney’s Bill Nye DVD collection!
With the help of this Guide you can bring instructional DVDs into your science curriculum.

What's on the DVD?

Bill Nye DVDs expand the educational features of Bill Nye the Science Guy programs. Each DVD provides students with science content through video clips aligned with National Science Education Standards (NSES) and a host of other resources.

Short video clips aligned with the NSES provide a unique opportunity for you to enhance your lessons using DVD technology. Now you can show a video clip, or even short segments of a clip, on command. But there are a host of other features, too! See the chart below for a summary.

From the Main menu, there are three chief sections:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Watch Program Menu</td>
<td>From this menu, you can play the program straight through or use the clips to customize your viewing.</td>
</tr>
<tr>
<td>Teacher Support</td>
<td>From this menu, you can access this Teacher’s Guide, the Glossary, Internet Links, and the Quiz.</td>
</tr>
<tr>
<td>Bonus Materials</td>
<td>Use this menu to try a different discussion starter, download a special screen-saver, or check out never-before-seen footage.</td>
</tr>
</tbody>
</table>

From the Watch Program menu, you can:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Play Program</td>
<td>Play the entire program from start to finish.</td>
</tr>
<tr>
<td>Bilingual Mode</td>
<td>View the entire program or clips in English or Spanish.</td>
</tr>
<tr>
<td>Glossary Mode</td>
<td>Make links to Glossary terms appear during the program.</td>
</tr>
<tr>
<td>Program Overview</td>
<td>View the program introduction, in which Bill discusses the topic covered.</td>
</tr>
<tr>
<td>Try This</td>
<td>Show students demonstrating science concepts.</td>
</tr>
<tr>
<td>Way Cool Scientist</td>
<td>Meet a real scientist who talks about his or her area of study.</td>
</tr>
<tr>
<td>Bill’s Demonstration</td>
<td>Look at a science demonstration conducted by Bill Nye.</td>
</tr>
<tr>
<td>Music Video</td>
<td>Enjoy a short music video that summarizes the topic in an age-appropriate and entertaining manner.</td>
</tr>
<tr>
<td>Science Standards</td>
<td>Take advantage of short video clips from the program, which are aligned with National Science Education Standards.</td>
</tr>
</tbody>
</table>
Give students a quiz to take independently or as a class. Seven to ten quiz items are aligned with the National Science Education Standards. The items are in multiple-choice or true-false format. Each wrong answer links to a standards-aligned video clip. At the end of the quiz, a scoring function reveals the number of correct initial answers.

Check out definitions of key terms and view video clips that reinforce the concepts.

View a quick overview of the features found on the DVD.

Print out or view this comprehensive Teacher’s Guide in PDF format.

Link to the Bill Nye area of Disney’s Edustation Web site, where you can find links to Internet sites related to the content of each Bill Nye program.

Find out what wasn’t in the episode! In most cases, there’s more of the Way Cool Scientist interview, Bill Nye outtakes, and an extra discussion starter.

See trailers of related DVDs and videos.

Download this cool screen-saver for your computer.

This Guide provides a Lesson Planning Worksheet (see page 12), which can assist you in setting up your instruction around a topic. The following sections of this Implementation Guide are offered to assist your planning process:

- Determining Objectives and Linking to Standards
- The Learning Cycle
  - Explore
  - Apply
  - Extend
  - Assess
Determining Objectives and Linking to Standards

1. The NSES Teaching Standard A states that science teachers must “select science content and adapt and design curricula to meet the interest, knowledge, understanding, abilities, and experience of students.”

The NSES recommends that teachers “integrate . . . a practical structure for the sequence of activities, and the content to be learned.” The primary instructional model recommended by the NSES is inquiry into authentic student-generated questions about natural or designed phenomena. Since most state and local standards documents were derived from the NSES, you will find that your local and state standards match closely with content standards in the Bill Nye DVD.

Each DVD contains a menu of clips that are aligned with the NSES. You can review the standards and their aligned clips in the Science Standards menu under Watch Program. Also, the Standards listed on page 10 of this Guide allow you to look at additional NSES content standards that are addressed on the video. Here’s an example of the content standards and clips aligned with the Bill Nye DVD entitled Blood and Circulation:

---

Life Science Standards (NSES) Addressed in Blood and Circulation

Life Science:
Structure and function in living systems

- Living systems at all levels of organization demonstrate the complementary nature of structure and function.

   Aligned clips:
   - 1 Blood vessels
   - 2 Heart pump and bloodstream
   - 3 Heart valves and blood circulation
   - 4 White blood cells
   - 5 Capillaries

- The human organism has systems for digestion, respiration, reproduction, circulation, excretion, movement, control, and coordination, and for protection.

   Aligned clips:
   - 6 Heart pump
   - 7 Heart muscle
   - 8 Pumping blood to brain
---
2. Determine your objectives for the lesson and how these objectives address the standards.

Sample Objectives for *Blood and Circulation*

In this activity students will:

- Observe and describe a body system responsible for supply and transport.
- Use this information to define a body system.
- Ask questions about the circulatory system.
- Explain how structure complements function in organs of the circulatory system.
- Cite examples of current research related to this system.

3. Design a learning cycle of instructional experiences and assessments for the students to engage in that will help students meet these standards. Students may be given teacher-planned investigations or may be guided to design their own investigations.

**The Learning Cycle**

The learning cycle is a sequence of activities that involve students in the learning process. The sequence found here is based on research from Lawson, Abraham, and Renner published in 1989. That has been adapted to include: Explore, Apply, Extend and Assess:

**Explore:** Involves assessing students' prior knowledge and providing opportunities for students to interact with content from the video.

**Apply:** Includes having students use the content learned during the Explore section in a new way that is meaningful to future learning.

**Extend:** Allows students to conduct further research around an area of interest within the topic.

**Assess:** Provides strategies meant to inform students and teachers about the content and processes that have been learned.

**Explore**

The NSES Teaching Standard B states: “Teachers of science guide and facilitate learning.” This standard addresses the constant need to balance your predetermined goals with allowing students to set and meet their own learning goals.

*Focus and Support Inquiries:* Support student inquiries by making decisions about “when to provide information” and “when to connect students with other sources.” Knowing the best time to intervene is often determined by allowing students to ask questions and to explore concepts openly.
The NSES Teaching Standard C states: “Teachers of science engage in ongoing assessment of their teaching and of student learning.”

*Assess in Order to Guide Teaching:* The Program Overview or the Discussion Starter on the DVD can be used to gauge students’ prior knowledge. You can use student responses to make decisions about appropriate instruction and adaptations in order to meet the needs of individual students. Assessment can be in the form of student reflections from standards-aligned video clips or answers to questions found on the science quiz. Or, as in the following example, a simple graphic organizer can facilitate a formative assessment.

**Example: T-Chart from *Blood and Circulation***

1. Ask students to fill out the “Know-New” T-Chart (see page 14). Have them list what they already know about the circulatory system (heart, blood vessels, blood, etc.) on the left side of their charts.

2. Show the Program Overview for *Blood and Circulation*. On the right side of the chart, have students list new things they have learned from watching the clip. Walk around the room and assist students in filling in their T-Charts. Replay the program as necessary to allow students to review sections of interest.

3. Once students have completed their charts, ask them to share what they have listed in the “New” column. Write these on the board. Have students write their own working definitions of the circulatory system. Once students have completed their definitions, collect and review their work to assess prior knowledge.

Conduct direct vocabulary instruction in the Explore phase. Research suggests that:

- Students must encounter words in context more than once to learn them.
- Instruction in new words enhances learning those words in context.
- One of the best ways to learn a new word is to associate an image with it.
- Direct vocabulary instruction on words that are critical to new content produces the most powerful learning.

Use the DVD Glossary with the linked video clips to expose students to new vocabulary words in context, along with associated video images. You can also find a printed version of the glossary terms in this Guide on page 16.
**Example: Using the Glossary for Direct Vocabulary Instruction**

**Blood and Circulation**

1. Present students with a brief explanation or description of the new term or phrase from the glossary. For example: “Capillary: A small blood vessel that connects arteries and veins.”

2. Present students with a nonlinguistic representation of the new term or phrase. Show the video clip associated with the term “capillary.”

3. Ask students to generate their own verbal description of “capillary.”

4. Ask students to create their own nonlinguistic representation of “capillary.”

5. Periodically ask students to review the accuracy of their explanations and representations. This can be done after the Apply activities.

**Apply**

Based on the information you gained from the Explore assessments, design appropriate activities for your students. Check the experiments listed in the Episode Guide (see page 11) for explanations of the demonstrations from the Bill Nye program as well as for additional experiments designed to help apply the knowledge gained.

In the following example from *Blood and Circulation*, the standards-based video clips provide background information, and an experiment from the Guide helps students apply what they have learned about arteries and veins.

**Example: The Structure and Function of Arteries and Veins**

1. Have students begin “Know-New” T-Charts, focusing on what they already know about the structure and function of blood vessels, arteries, and veins.

2. Watch the following chapters from the Bill Nye DVD *Blood and Circulation*:
   - Blood vessels
   - Heart pump and bloodstream
   - Capillaries

3. Complete the “Know-New” T-Charts.

4. Give students copies of the Student Recording Sheet (see page 15) and have them fill the sheets out as they conduct their experiments.

5. Do the experiment entitled “Pump it Up!” from the *Blood and Circulation* Episode Guide, in which students observe the apparent effects of pressure on arteries and veins.

6. Write down any remaining questions about the structure and function of blood vessels, arteries, and veins.
Extend

The NSES Teaching Standard D states: “Teachers of science design and manage learning environments that provide students with the time, space, and resources needed for learning science.” School administrators, parents, and the community can assist teachers in providing local resources that make science lessons pertinent and meaningful.

Identify and Use Resources Outside of the School: “The school science program must extend beyond the walls of the school.” Each Bill Nye DVD contains resources designed to facilitate such understanding, including:

- **Way Cool Scientist**, found in both Watch Program and Bonus Materials, in which scientists discuss their current areas of study. This real-world connection often results in a deeper student understanding of a particular career.
- **Disney’s Edustation Web site**, where relevant Internet links provide a starting point for students to further explore science topics.
- **Try these video clips**, with activities parents and students can do at home. The questions generated by students from these experiences can be used as foundations from which they may conduct their own research.
- **Standards-aligned video clips** and Bill’s demonstration video clips, which can help generate topics for further research. After viewing the clips, have students list their questions, perhaps about the most current developments in a topic. By conducting online or library research, students will find answers to their questions and will learn about a topic in greater depth.

Example: Conducting Student Research Using *Blood and Circulation*

Ask students to choose one of the questions they had after completing the activities from *Blood and Circulation*. An example of a student research question might be, “How has the technology related to artificial hearts advanced in the last ten years?” Explain to students that they will be conducting research to find answers to their questions. Some students may want to complete online or library research, others may want to ask an expert in the field, while others may want to design and conduct a scientific investigation. Encourage students to write a detailed procedure for finding answers to their questions. Ask students to find one or more examples of current research dealing with the circulatory system that is related to their question. **Note:** Students with similar questions may work together to complete the assignment.
Assess

Once students have conducted the research, you may choose to assess them in a number of different ways:

- By having students write about what they learned in a journal.
- By having students submit projects or reports.
- By having students take the program quiz to gauge their understanding of certain facts in the video. You can either print the quiz (found in this Guide on page 18) and have each student complete it individually or use the DVD screen version and the scoring feature for whole-class assessment.
- By designing other standards-aligned questions to augment those that are provided.

While the quiz will provide you with information about what the students have learned, it does not assess how students have processed the information. Below you will find assessment ideas that can be used to measure both content and process.

A Sample Assessment for Blood and Circulation

1. Explain to students that an important aspect of scientific inquiry is to communicate findings to others. In this assessment, students will present the following information to their peers:
   - The question they investigated.
   - The method that was used to find answers to their question.
   - Problems or successes during the search.
   - Answers to their question.
   - Current research related to their question.
   - New questions that have arisen.

2. Distribute the rubric found in the Lesson Planning Worksheet (see page 13) to students so they know how they will be assessed. Make sure students understand the criteria found in the rubric. Before you begin, you may want to allow students to make changes to the rubric so that it is clearer or makes more sense from their perspectives.

3. Allow students time to gather information to answer their questions and to prepare for their presentations. As students conduct this work, walk around the room and ask questions to assess their progress and provide input as needed.

4. Take a few minutes to clarify the rules of the presentation with the students. You may want to have multiple copies of the rubric available so that peers can rate the presentations.

5. As presentations are made, assess the quality of the student's work as thoroughly and as equitably as you possibly can.

Congratulations! You have now completed the steps to set up a lesson plan using the Lesson Planning Worksheet. You have also explored many of the features of the Bill Nye DVD as well as the supplemental information found in this Teacher's Guide. And most important, you’ve made significant strides toward incorporating DVD technology into your day-to-day instruction.
Grades K-4

Science as Inquiry

Abilities necessary to do scientific inquiry

■ Ask a question about objects, organisms, and events in the environment.
■ Plan and conduct a simple investigation.

Understandings about scientific inquiry

■ Scientific investigations involve asking and answering a question and comparing the answer with what scientists already know about the world.
■ Scientists use different kinds of investigations depending on the questions they are trying to answer. Types of investigations include describing objects, events, and organisms; classifying them; and doing a fair test (experimenting).

Physical Science

Properties of objects and materials

■ Objects have many observable properties, including size, weight, shape, color, temperature, and the ability to react with other substances. Those properties can be measured using tools, such as rulers, balances, and thermometers.

Science and Technology

Understandings about science and technology

■ People have always had questions about their world. Science is one way of answering questions and explaining the natural world.

Grades 5-8

Science as Inquiry

Abilities necessary to do scientific inquiry

■ Identify questions that can be answered through scientific investigations.
■ Design and conduct a scientific investigation.
Understandings about scientific inquiry

- Different kinds of questions suggest different kinds of scientific investigations. Some investigations involve observing and describing objects, organisms, or events; some involve collecting specimens; some involve experiments; some involve seeking more information; some involve discovery of new objects and phenomena; and some involve making models.

Life Science

Structure and function in living systems

- Specialized cells perform specialized functions in multicellular organisms. Groups of specialized cells cooperate to form a tissue, such as a muscle. Different tissues are in turn grouped together to form larger functional units, called organs. Each type of cell, tissue, and organ has a distinct structure and set of functions that serve the organism as a whole.
Episode Guide

Smell

**Nifty Questions in This Episode**

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Where does our sense of taste come from?</td>
<td>Mainly from our sense of smell (nose is above the tongue).</td>
</tr>
<tr>
<td>How many odors can the human organism smell?</td>
<td>10,000 odors.</td>
</tr>
<tr>
<td>How much stronger is a dog’s sense of smell than a human’s?</td>
<td>40 times more powerful!</td>
</tr>
</tbody>
</table>

**Awesome Answers**

Experiments shown on the video:

**BLIND TASTE**

Objective: To demonstrate the effect that aromas have on your sense of taste.

- With a friend, cut an apple and a potato into slices.
- Tie a cloth around your friend’s eyes so that he/she can’t see. Place nose plugs over his/her nose.
- Have your blindfolded friend taste each food and try to identify which is the apple and which is the potato. Without our sense of smell, things may taste the same.

**More interesting stuff to do:**

**HOW SWEET IT IS!**

Objective: To smell and taste vegetables and fruits that have been influenced by environmental factors.

- Select six vegetables and six fruits (two of which should be citrus). POSSIBLE FRUITS: apple, pear, banana, peach, grapes, pineapple, tomato, lemon, lime, grapefruit, and tangerine. POSSIBLE VEGETABLES: onion, radish, celery, green beans, potato, squash, and cucumber.
- Cut each item into three pieces. Place one piece into a refrigerator; leave one out at room temperature; fry, boil, or microwave the last piece.
- Smell and taste each food. Evaluate the fruits and vegetables according to their sourness, bitterness, and sweetness, and record the results. Also record any physical characteristics (texture, juicy, hard, soft etc.).
- How did the environment and cooking procedures affect each type of food?

**A ROSE IS A ROSE**

Objective: To develop a variety of aromas from flowers and plants.

- Collect a variety of flowers, leaves, and roots of common grasses, herbs, or flowering plants from your yard, or purchase inexpensive plants from a nursery.
- Place collections of flowers and plants in various bowls and rub each with a spoon. Experiment with different combinations.
- List the ingredients of each mixture that you have developed. Describe each mixture’s aromas: Are they sweet? Sour? Pungent? Try adding berries and fruits to change the fragrance.
- To carry the scent, add a few drops of rubbing alcohol or glycerin. Combine different smells, creating blends that are sweet/sour, bitter/sweet, and so on.
- Have your friends choose their favorite aromas and explain their choices. Does sense of smell and taste vary from person to person?

Observations: (Record what happened)

Results: (Make your own data table)

Conclusions: (Use your observations and results to describe what you learned)
Glossary

Smell

Fold and cut to use as flashcards.

**MUCUS**

Mucus
Mucus is a sticky, slick substance that lines the nose and throat in order to moisten and protect these areas.

**EPITHELIAL OLFACTORY NERVE CELLS**

Epithelial olfactory nerve cells
Epithelial olfactory or “smell cells” detect and absorb inhaled molecules and transmit the information to the brain.

**MOLECULE**

Molecule
A molecule is the smallest particle of a substance that still possesses all of the physical properties of the particular substance.
OLFACTORY BULB

The olfactory bulb, located in the brain above the nasal passages, is the part of the brain that recognizes smells. When epithelial olfactory nerve cells detect molecules, they send signals through the olfactory nerve to the brain. The olfactory bulb registers the chemical pattern as a distinct smell.

PHEROMONES

Pheromones are chemicals released by animals and insects that can be detected through the sense of smell.

NASAL TURBINATES

Nasal turbinates refer to the bony parts or plates of cartilage that form the upper nasal cavities. They assist with the flow of air, warm air before it enters the lungs, and also help to guard against inhaled contaminants.
Quiz
Smell

True or False? Circle T or F

1. Our sense of smell comes mainly from our sense of taste. T or F
2. Our noses can detect chemicals in the air. T or F
3. Molecules in inhaled air are picked up by epithelial olfactory nerve cells, our “smell cells”. T or F
4. The olfactory bulb is located in our noses. T or F
5. Our sense of smell protects us. T or F
6. When our epithelial nerve cells fatigue, they don’t register a smell as strongly. T or F
7. Ants use chemical signals to communicate. T or F

Multiple Choice: Circle the letter of the best answer

8. How many different smells can humans sense?
   A. 100
   B. 1,000
   C. 10,000
   D. 100,000

9. Which of the following correctly describes the location of smell sensors in these animals?
   A. Moths smell with hairs on their antennae.
   B. Flies have smell sensors on their feet.
   C. Fish have smell sensors in their nostrils.
   D. All of the above are correct.

10. Which of the following is not a correct statement regarding a shark’s sense of smell?
    A. A shark has more smell receptors than humans.
    B. A shark uses less of its brain to interpret smell information than humans.
    C. A shark can detect much smaller amounts of molecules in water than humans.
    D. A shark is more dependent upon its sense of smell for survival than humans.
