# Table of Contents

1. **Implementation Guide** ......................................................... 2–9
   This descriptive guide will assist you in integrating the DVD science and education content into your instructional program.

2. **National Science Education Standards** ................................. 10
   See the complete *National Science Education Standards (NSES)* correlated for this program.

3. **Episode Guide** ................................................................. 11
   Step-by-step procedures make it easy to complete the experiments shown in the program. “More Interesting Stuff to Do” gives more experiments that extend student learning.

4. **Lesson Planning Worksheet** .............................................. 12–13
   This template helps you incorporate all the features of the Bill Nye DVD into your daily lesson plans.

5. **Student “Know / New” Chart** ............................................. 14
   A “Know-New” T-Chart assesses students’ prior knowledge and what they learned.

6. **Student Recording Sheet** .................................................... 15
   This handout gives you a standardized format that students can fill out as they conduct an experiment.

7. **Glossary** ................................................................. 16
   Use the terms and definitions found here to assist you in direct vocabulary instruction. The glossary terms are also found on the DVD.

8. **Quiz** .......................................................................... 17
   This written version of the interactive quiz on the DVD provides a ready-to-go written test. Multiple choice and true-false items address key concepts found in the standards and in the program.

9. **Quiz Answer Key** .............................................................. 18
   A separate page contains the quiz answer key.
Implementation Guide

Welcome to Disney’s Bill Nye DVD collection!
With the help of this Guide you can bring instructional DVDs into your science curriculum.

What’s on the DVD?

Bill Nye DVDs expand the educational features of Bill Nye the Science Guy programs. Each DVD provides students with science content through video clips aligned with National Science Education Standards (NSES) and a host of other resources.

Short video clips aligned with the NSES provide a unique opportunity for you to enhance your lessons using DVD technology. Now you can show a video clip, or even short segments of a clip, on command. But there are a host of other features, too! See the chart below for a summary.

From the **Main** menu, there are three chief sections:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Watch Program Menu</td>
<td>From this menu, you can play the program straight through or use the clips to customize your viewing.</td>
</tr>
<tr>
<td>Teacher Support</td>
<td>From this menu, you can access this Teacher’s Guide, the Glossary, Internet Links, and the Quiz.</td>
</tr>
<tr>
<td>Bonus Materials</td>
<td>Use this menu to try a different discussion starter, download a special screen-saver, or check out never-before-seen footage.</td>
</tr>
</tbody>
</table>

From the **Watch Program** menu, you can:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Play Program</td>
<td>Play the entire program from start to finish.</td>
</tr>
<tr>
<td>Bilingual Mode</td>
<td>View the entire program or clips in English or Spanish.</td>
</tr>
<tr>
<td>Glossary Mode</td>
<td>Make links to Glossary terms appear during the program.</td>
</tr>
<tr>
<td>Program Overview</td>
<td>View the program introduction, in which Bill discusses the topic covered.</td>
</tr>
<tr>
<td>Try This</td>
<td>Show students demonstrating science concepts.</td>
</tr>
<tr>
<td>Way Cool Scientist</td>
<td>Meet a real scientist who talks about his or her area of study.</td>
</tr>
<tr>
<td>Bill’s Demonstration</td>
<td>Look at a science demonstration conducted by Bill Nye.</td>
</tr>
<tr>
<td>Music Video</td>
<td>Enjoy a short music video that summarizes the topic in an age-appropriate and entertaining manner.</td>
</tr>
<tr>
<td>Science Standards</td>
<td>Take advantage of short video clips from the program, which are aligned with National Science Education Standards.</td>
</tr>
</tbody>
</table>
From the **Teacher Support** menu, you can:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Science Quiz</td>
<td>Give students a quiz to take independently or as a class. Seven to ten quiz items are aligned with the National Science Education Standards. Each wrong answer links to a standards-aligned video clip. At the end of the quiz, a scoring function reveals the number of correct initial answers.</td>
</tr>
<tr>
<td>Glossary</td>
<td>Check out definitions of key terms and view video clips that reinforce the concepts.</td>
</tr>
<tr>
<td>DVD Features</td>
<td>View a quick overview of the features found on the DVD.</td>
</tr>
<tr>
<td>Teacher’s Guide</td>
<td>Print out or view this comprehensive Teacher’s Guide in PDF format.</td>
</tr>
<tr>
<td>Internet Link</td>
<td>Link to the Bill Nye area of Disney’s Edustation Web site, where you can find links to Internet sites related to the content of each Bill Nye program.</td>
</tr>
</tbody>
</table>

From the **Bonus Materials** menu, you can:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bonus Material</td>
<td>Find out what wasn’t in the episode! In most cases, there’s more of the Way Cool Scientist interview, Bill Nye outtakes, and an extra discussion starter.</td>
</tr>
<tr>
<td>Additional Clips</td>
<td>See trailers of related DVDs and videos.</td>
</tr>
<tr>
<td>Screen-Saver</td>
<td>Download this cool screen-saver for your computer.</td>
</tr>
</tbody>
</table>

**The Planning Process**

This Guide provides a Lesson Planning Worksheet (see page 12), which can assist you in setting up your instruction around a topic. The following sections of this Implementation Guide are offered to assist your planning process:

- **Determining Objectives and Linking to Standards**
- **The Learning Cycle**
  - Explore
  - Apply
  - Extend
  - Assess
Determining Objectives and Linking to Standards

1. The NSES Teaching Standard A states that science teachers must “select science content and adapt and design curricula to meet the interest, knowledge, understanding, abilities, and experience of students.”

The NSES recommends that teachers “integrate . . . a practical structure for the sequence of activities, and the content to be learned.” The primary instructional model recommended by the NSES is inquiry into authentic student-generated questions about natural or designed phenomena. Since most state and local standards documents were derived from the NSES, you will find that your local and state standards match closely with content standards in the Bill Nye DVD.

Each DVD contains a menu of clips that are aligned with the NSES. You can review the standards and their aligned clips in the Science Standards menu under Watch Program. Also, the Standards listed on page 10 of this Guide allow you to look at additional NSES content standards that are addressed on the video. Here’s an example of the content standards and clips aligned with the Bill Nye DVD entitled Blood and Circulation:

Life Science Standards (NSES) Addressed in Blood and Circulation

Life Science:
Structure and function in living systems

- Living systems at all levels of organization demonstrate the complementary nature of structure and function.

  Aligned clips:
  - 1 Blood vessels
  - 2 Heart pump and bloodstream
  - 3 Heart valves and blood circulation
  - 4 White blood cells
  - 5 Capillaries

- The human organism has systems for digestion, respiration, reproduction, circulation, excretion, movement, control, and coordination, and for protection.

  Aligned clips:
  - 6 Heart pump
  - 7 Heart muscle
  - 8 Pumping blood to brain
2. Determine your objectives for the lesson and how these objectives address the standards.

Sample Objectives for Blood and Circulation

In this activity students will:

■ Observe and describe a body system responsible for supply and transport.
■ Use this information to define a body system.
■ Ask questions about the circulatory system.
■ Explain how structure complements function in organs of the circulatory system.
■ Cite examples of current research related to this system.

3. Design a learning cycle of instructional experiences and assessments for the students to engage in that will help students meet these standards. Students may be given teacher-planned investigations or may be guided to design their own investigations.

The Learning Cycle

The learning cycle is a sequence of activities that involve students in the learning process. The sequence found here is based on research from Lawson, Abraham, and Renner published in 1989. That has been adapted to include: Explore, Apply, Extend and Assess:

**Explore:** Involves assessing students’ prior knowledge and providing opportunities for students to interact with content from the video.

**Apply:** Includes having students use the content learned during the Explore section in a new way that is meaningful to future learning.

**Extend:** Allows students to conduct further research around an area of interest within the topic.

**Assess:** Provides strategies meant to inform students and teachers about the content and processes that have been learned.

**Explore**

The NSES Teaching Standard B states: “Teachers of science guide and facilitate learning.” This standard addresses the constant need to balance your predetermined goals with allowing students to set and meet their own learning goals.

*Focus and Support Inquiries:* Support student inquiries by making decisions about “when to provide information” and “when to connect students with other sources.” Knowing the best time to intervene is often determined by allowing students to ask questions and to explore concepts openly.
The NSES Teaching Standard C states: “Teachers of science engage in ongoing assessment of their teaching and of student learning.”

Assess in Order to Guide Teaching: The Program Overview or the Discussion Starter on the DVD can be used to gauge students’ prior knowledge. You can use student responses to make decisions about appropriate instruction and adaptations in order to meet the needs of individual students. Assessment can be in the form of student reflections from standards-aligned video clips or answers to questions found on the science quiz. Or, as in the following example, a simple graphic organizer can facilitate a formative assessment.

Example: T-Chart from Blood and Circulation

1. Ask students to fill out the “Know-New” T-Chart (see page 14). Have them list what they already know about the circulatory system (heart, blood vessels, blood, etc.) on the left side of their charts.

2. Show the Program Overview for Blood and Circulation. On the right side of the chart, have students list new things they have learned from watching the clip. Walk around the room and assist students in filling in their T-Charts. Replay the program as necessary to allow students to review sections of interest.

3. Once students have completed their charts, ask them to share what they have listed in the “New” column. Write these on the board. Have students write their own working definitions of the circulatory system. Once students have completed their definitions, collect and review their work to assess prior knowledge.

Conduct direct vocabulary instruction in the Explore phase. Research suggests that:

- Students must encounter words in context more than once to learn them.
- Instruction in new words enhances learning those words in context.
- One of the best ways to learn a new word is to associate an image with it.
- Direct vocabulary instruction on words that are critical to new content produces the most powerful learning.

Use the DVD Glossary with the linked video clips to expose students to new vocabulary words in context, along with associated video images. You can also find a printed version of the glossary terms in this Guide on page 16.
Example: Using the Glossary for Direct Vocabulary Instruction

**Blood and Circulation**

1. Present students with a brief explanation or description of the new term or phrase from the glossary. For example: “Capillary: A small blood vessel that connects arteries and veins.”

2. Present students with a nonlinguistic representation of the new term or phrase. Show the video clip associated with the term “capillary.”

3. Ask students to generate their own verbal description of “capillary.”

4. Ask students to create their own nonlinguistic representation of “capillary.”

5. Periodically ask students to review the accuracy of their explanations and representations. This can be done after the Apply activities.

Apply

Based on the information you gained from the Explore assessments, design appropriate activities for your students. Check the experiments listed in the Episode Guide (see page 11) for explanations of the demonstrations from the Bill Nye program as well as for additional experiments designed to help apply the knowledge gained.

In the following example from *Blood and Circulation*, the standards-based video clips provide background information, and an experiment from the Guide helps students apply what they have learned about arteries and veins.

Example: The Structure and Function of Arteries and Veins

1. Have students begin “Know-New” T-Charts, focusing on what they already know about the structure and function of blood vessels, arteries, and veins.

2. Watch the following chapters from the Bill Nye DVD *Blood and Circulation*:
   - Blood vessels
   - Heart pump and bloodstream
   - Capillaries

3. Complete the “Know-New” T-Charts.

4. Give students copies of the Student Recording Sheet (see page 15) and have them fill the sheets out as they conduct their experiments.

5. Do the experiment entitled “Pump it Up!” from the Blood and Circulation Episode Guide, in which students observe the apparent effects of pressure on arteries and veins.

6. Write down any remaining questions about the structure and function of blood vessels, arteries, and veins.
Extend

The NSES Teaching Standard D states: “Teachers of science design and manage learning environments that provide students with the time, space, and resources needed for learning science.” School administrators, parents, and the community can assist teachers in providing local resources that make science lessons pertinent and meaningful.

Identify and Use Resources Outside of the School: “The school science program must extend beyond the walls of the school.” Each Bill Nye DVD contains resources designed to facilitate such understanding, including:

- Way Cool Scientist, found in both Watch Program and Bonus Materials, in which scientists discuss their current areas of study. This real-world connection often results in a deeper student understanding of a particular career.
- Disney’s Edustation Web site, where relevant Internet links provide a starting point for students to further explore science topics.
- Try these video clips, with activities parents and students can do at home. The questions generated by students from these experiences can be used as foundations from which they may conduct their own research.
- Standards-aligned video clips and Bill’s demonstration video clips, which can help generate topics for further research. After viewing the clips, have students list their questions, perhaps about the most current developments in a topic. By conducting online or library research, students will find answers to their questions and will learn about a topic in greater depth.

Example: Conducting Student Research Using Blood and Circulation

Ask students to choose one of the questions they had after completing the activities from Blood and Circulation. An example of a student research question might be, “How has the technology related to artificial hearts advanced in the last ten years?” Explain to students that they will be conducting research to find answers to their questions. Some students may want to complete online or library research, others may want to ask an expert in the field, while others may want to design and conduct a scientific investigation. Encourage students to write a detailed procedure for finding answers to their questions. Ask students to find one or more examples of current research dealing with the circulatory system that is related to their question. Note: Students with similar questions may work together to complete the assignment.
Assess

Once students have conducted the research, you may choose to assess them in a number of different ways:

■ By having students write about what they learned in a journal.
■ By having students submit projects or reports.
■ By having students take the program quiz to gauge their understanding of certain facts in the video. You can either print the quiz (found in this Guide on page 18) and have each student complete it individually or use the DVD screen version and the scoring feature for whole-class assessment.
■ By designing other standards-aligned questions to augment those that are provided.

While the quiz will provide you with information about what the students have learned, it does not assess how students have processed the information. Below you will find assessment ideas that can be used to measure both content and process.

A Sample Assessment for **Blood and Circulation**

1. Explain to students that an important aspect of scientific inquiry is to communicate findings to others. In this assessment, students will present the following information to their peers:
   ■ The question they investigated.
   ■ The method that was used to find answers to their question.
   ■ Problems or successes during the search.
   ■ Answers to their question.
   ■ Current research related to their question.
   ■ New questions that have arisen.

2. Distribute the rubric found in the Lesson Planning Worksheet (see page 13) to students so they know how they will be assessed. Make sure students understand the criteria found in the rubric. Before you begin, you may want to allow students to make changes to the rubric so that it is clearer or makes more sense from their perspectives.

3. Allow students time to gather information to answer their questions and to prepare for their presentations. As students conduct this work, walk around the room and ask questions to assess their progress and provide input as needed.

4. Take a few minutes to clarify the rules of the presentation with the students. You may want to have multiple copies of the rubric available so that peers can rate the presentations.

5. As presentations are made, assess the quality of the student’s work as thoroughly and as equitably as you possibly can.

Congratulations! You have now completed the steps to set up a lesson plan using the Lesson Planning Worksheet. You have also explored many of the features of the Bill Nye DVD as well as the supplemental information found in this Teacher’s Guide. And most important, you’ve made significant strides toward incorporating DVD technology into your day-to-day instruction.
Science as Inquiry

Abilities necessary to do scientific inquiry

■ Identify questions that can be answered through scientific investigations.
■ Design and conduct a scientific investigation.
■ Develop descriptions, explanations, predictions, and models using evidence.
■ Communicate scientific procedures and explanations.

Understandings about scientific inquiry

■ Different kinds of questions suggest different kinds of scientific investigations. Some investigations involve observing and describing objects, organisms, or events; some involve collecting specimens; some involve experiments; some involve seeking more information; some involve discovery of new objects and phenomena; and some involve making models.
■ Current scientific knowledge and understanding guide scientific investigations. Different scientific domains employ different methods, core theories, and standards to advance scientific knowledge and understanding.

Physical Science

Properties and changes of properties in matter

■ A substance has characteristic properties, such as density, a boiling point, and solubility, all of which are independent of the amount of the sample. A mixture of substances often can be separated into the original substances using one or more of the characteristic properties.

Transfer of energy

■ Energy is a property of many substances and is associated with heat, light, electricity, mechanical motion, sound, nuclei, and the nature of a chemical. Energy is transferred in many ways.
■ Heat moves in predictable ways, flowing from warmer objects to cooler ones, until both reach the same temperature.
■ Light interacts with matter by transmission (including refraction), absorption, or scattering (including reflection). To see an object, light from that object—emitted by or scattered from it—must enter the eye.
■ Electrical circuits provide a means of transferring electrical energy when heat, light, sound, and chemical changes are produced.
■ In most chemical and nuclear reactions, energy is transferred into or out of a system. Heat, light, mechanical motion, or electricity might all be involved in such transfers.
Episode Guide
Static Electricity

Nifty Questions in This Episode | Awesome Answers
--- | ---
What is static electricity? | Static electricity consists of charged electron particles that won't flow.
What are electrons? | Electrons are tiny, charged particles and are parts of an atom.
Can lightning strike backwards? | Yes, lightning can strike backwards, from the ground to a cloud.
How many lightning bolts hit the ground all over the Earth? | Fifty to a hundred lightning bolts hit the ground all over Earth every second.
What is a lightning rod? | A lightning rod guides lightning to the ground.
Where are you safest during a lightning storm? | During a lightning storm, you are safest in an automobile.

Experiments shown on the video:

ROCK, ROLL, AND BEND
*Objective: To demonstrate static electricity at work.*
- Roll up a 15-centimeter-square piece of paper and tape it together.
- Rub a comb through your hair and place the comb next to the paper roll; the paper will roll with the comb.
- Comb your hair and place the comb near a fine stream of running water; the water will bend.

STATIC BALLOONS
*Objective: To illustrate the attraction of static electricity.*
- Rub two blown-up balloons on your hair. Touch one to a wall and leave it clinging.
- Place some sugar on a dish and try to pick up the sugar with the other balloon.
- Pick up some scraps of paper with the balloon, etc. (You may have to rub the balloons again.)

More interesting stuff to do:

YOU GOTTA HAVE SPARK!
*Objective: To store an electric charge, and release that charge in the form of an energy spark.*
- Coat the inside and outside of a 1-quart jar or glass juice bottle with a thick coat of rubber cement, shellac, or polyurethane (clear liquid plastic paint). Leave the top 3 centimeters of the jar uncoated.
- When the jar is dry, line it inside and outside with aluminum foil, leaving the top 3 centimeters of the jar unlined.
- Cut a thick piece of cardboard to fit the jar or bottle opening.
- Cut a hole in the middle of this cardboard to fit a one-hole rubber stopper.
- Place a 10-centimeter piece of hollow glass tubing (or a thick drinking straw) through the hole in the rubber stopper (leave 3 centimeters sticking up).
- Place the stopper, with the glass tubing in place, into the hole in the cardboard.
- Place the cardboard over the mouth of the jar and tape it into place around the edges with masking tape.
- Slide a bare copper wire (or beaded metal pull chain) about 20 centimeters long through the glass tubing until 6 centimeters of wire or chain rests on the bottom of the jar.
- Using the end of the wire or chain that is sticking out of the jar, crumple it into a ball-shaped mass by twisting the top of the internal copper wire (or pull chain) big enough (1 to 2 centimeters in diameter) to allow a spark to jump when the wire is touched.
- Place the jar on pieces of bare copper wire.
- Rub a comb or metal object (with a handle) 50 strokes on a piece of wool.
- See how close you can get to the top of the copper wire ball before a spark occurs.
- Try the above experiment with your bare fingers or hand to see if a mild spark can be produced.
- For a better charge, connect the top of the internal wire to a mild, hand-cranked static generator; disconnect the hand generator.
- With a metal object held by a piece of wood at the middle, touch first the outside of the jar’s aluminum, then the top of the internal wire. Sparks should fly as you approach the top wire.

Title of Experiment

Question: (What are you testing?)

Procedure: (Describe the experiment)

Materials: (List what you used)

Observations: (Record what happened)

Results: (Make your own data table)

Conclusions: (Use your observations and results to describe what you learned)
Electricity
Electricity is the flow of electrons.

Static Electricity
When electricity is contained in or produced by stationary charges, it is called static electricity.

Electrons
Electrons are tiny negatively charged particles that are parts of atoms.

Discharge
Discharge refers to the process by which electrons leave an electrically charged object.
Quiz
Static Electricity

True or False? Circle T or F

1. We can see lightning because electricity makes air glow.  T or F
2. Electricity is the flow of protons.  T or F
3. Oppositely charged objects repel each other.  T or F
4. Electrons can move through the human body.  T or F
5. Sparks are the result of electrically charged particles jumping from one surface to another.  T or F
6. Static in radios and televisions is caused by electrons moving through electric wires.  T or F
7. A ground wire lets electrons get to the ground.  T or F

Multiple Choice: Circle the letter of the best answer

8. Which of the following is a true statement describing how a van de Graaf generator works?
   A. Negative charges are deposited on the belt, which deposits positive charges on the metal ball.
   B. Positive charges are deposited on the belt, which deposits negative charges on the metal ball.
   C. Negative charges are deposited on the belt, which deposits negative charges on the metal ball.
   D. Positive charges are deposited on the belt, which deposits positive charges on the metal ball.

9. Which of the following is true regarding “static cling” in clothes?
   A. “Static cling” is caused by electron buildup on clothes.
   B. Electrons create a negative static electric charge on clothes.
   C. Water can absorb the electric charge of “static cling.”
   D. All of the above.

10. Which of the following is not involved in the production of thunder?
    A. Lightning strikes.
    B. Sound is produced as the electrical buildup is discharged.
    C. The air is heated to very high temperatures.
    D. Sound is produced as hot air collides with cool air.
